

Reconditioned Filtration Equipment

Flexibulk, through its links with Carlson offers a comprehensive range of new filtration equipment to suit most filtration applications. From plate and frame presses to the most sophisticated membrane filters, Flexibulk will look after your needs.

The range includes the following filter types:

- Plate and frame and sheet filters from 20cmx20cm to 120cmx120cm of varying lengths. Manual models and fully automatic closing systems are available.
- Lenticular housings to suit all types of application using XE-CEL-LENT lenticular cartridges
- Candle Filters
- Horizontal Leaf Filters
- Crossflow microfiltration units

Whatever your individual needs, Flexibulk will provide you with the most effective filtration solution

A typical example of the new equipment range is the 40cm x 40 cm XL 2000 filter. This can be equipped with either stainless steel or Noryl® elements

Spare Parts for the Filter Range

Another important element of Flexibulk's support service is to supply spare parts for their filter range, including:

- Consumable spares which include eyelet seals, in a host of materials including Nitrile, Silicon, Natural Rubber, EPDM, Butyl and Viton.
- Servicing spares including pump spares, sight glasses, valve diaphragms and pressure gauges etc. Service kits for hydraulic filter press closing systems are also available.

Through Carlson, Flexibulk also provides the full range of filtration equipment manufactured by Filtrox AG. The supply of spare parts and an overhaul service are available as part of its service for all Filtrox equipment.
