

Carlson Filtration Product Range

Carlson is acknowledged for its expertise in the field of solid/liquid separation in the food and beverage industries. From the whisky and other distilled spirits, wine and fortified wines and brewing industries, through to the clarification of fruit juices, Carlson has the ideal range of products to suit all applications. All the main filter media grades are available in filter sheet and lenticular forms, to suit all principal equipment types. Through ongoing product research and development and constant investment our flexible manufacturing process, product performance is constantly enhanced.

Carlson's series of depth filter sheets comprises a complete range of products tailored specially for applications where purity and quality are paramount. From the removal of coarse matter right through to sterilising filtration, there is a product ideally suited for all applications. All products are carefully formulated to provide particular filtration characteristics. Ongoing investment in manufacturing facilities, coupled with stringent quality management practices (backed up by operating to ISO 9002:1994), ensure consistent product quality.

Our Sales Office and Technical Development Centre will be delighted to assist you in the correct choice of filter sheet for your application.

The range comprises a number of main product groups:

- XE range of filter sheets - for use in clarifying and sterilising filtration duties
- EE range of sheets for use where all cellulose fibre sheets are needed
- W2 support sheets for depth filtration of bulk liquids, such as in beer and lager production, fruit juice manufacture or the processing of gelatine
- NA range of sheets for a wide variety of applications
- BK range - for high performance speciality applications
- Prop 4 sheets which incorporate PVPP (polyvinylpolypyrrolidone) which is used to stabilise beers and lagers without the need to add PVPP separately and then remove it later.
- Proc 3 sheets which incorporate activated carbon for colour, odour and taste correction
- Laboratory scale single filter sheets for all sorts of applications
